

The comprehensive Biosecurity Toolkit for poultry farms

A practical, interactive guide to building a biosecure mindset on every farm.

What measures should I take to prevent disease outbreaks in my flock?

How do I learn more about practical biosecurity?

Building the **future**
of **livestock** protection

What's in your Biosecurity Toolkit?

Biosecurity starts with mindset, not materials. It's about people understanding why it matters, not just how to implement it correctly.

This toolkit helps you and your team strengthen that mindset — combining simple actions, smart planning, and the right tools.

**Biosecurity as
an Investment**

Biosecurity is an Investment

It's not a cost, it's an investment in your business.

Biosecurity protects your flock, your livelihood and your reputation.

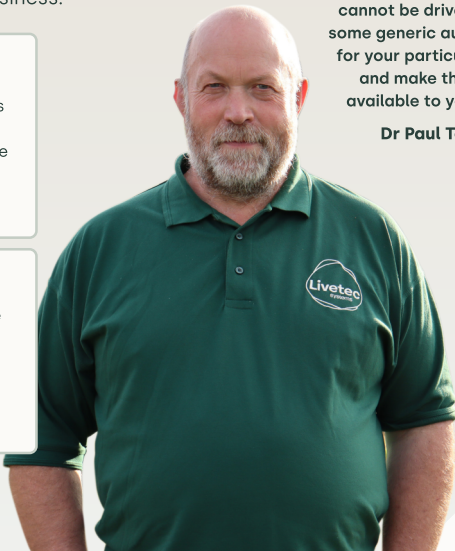

Investment isn't always financial, it's also time. Time to plan. Time to change behaviours.

Understanding where to spend is key.
A £5 lock can sometimes do more than a £5,000 wheel wash.

The return on investment is peace of mind and a more resilient business.

"A focus on biosecurity is a sound investment in your business. To pay well, improvements cannot be driven by the need to tick boxes in some generic audit. Changes must be effective for your particular farm, your circumstances, and make the best use of the resources available to you (personnel and finance)."

Dr Paul Talling, Biosecurity Advisor

Training: Building the 'Why'

Biosecurity starts with people.

Biosecurity is a **mindset** before physical structures.

Training is advice in action and gives your team the level of understanding they need to make good decisions every day.

Reasons to train:

1

Build mindset

Helps staff understand why biosecurity can make a difference.

2

Spot risks early

Empowers people to recognise risks and propose fixes before they become a problem.

3

Create consistency

A collective resilience – everyone working to the same standards, across every site.

What training looks like:

- E-learning courses – online and face to face accredited courses available
- Bespoke, on-farm sessions identifying real-world risks within live scenarios.
- Ongoing refreshment of statutory/industry requirements, plus additional CPD/topic specific training as needed. Helping to build a competent workforce, building habits and confidence.

"Empower your staff with knowledge so they can make smart, safe decisions."

Amy Davies, Biosecurity Advisor

Digital Tools: Be Ready

Preparedness is prevention.

What digital biosecurity looks like:

- Tracking disease risk, movement, and biosecurity data in real time.
- Storing Contingency Plans digitally, ready to use instantly by anyone given access.
- Quick updates and sharing of information without paper system delays.
- Will speed up APHA investigations and settling of any claims during an outbreak.

James Baxter, Chair of BFREPA

"I think the best thing we can do on-farm, in case we get AI, is to be prepared. What better thing can you do than have a Contingency Plan drawn up by professionals"

"You always need a Contingency Plan yesterday."

Jack Hughes, Biosecurity Advisor

*The only
rival to an
outbreak is
prevention.*

*Digital tools give you instant access.
Everything is ready and up to date.*
